ECO™-14

from PRC:

Special advantages for school-aged clients!

Capture and hold attention with an oversized 14.1" screen!

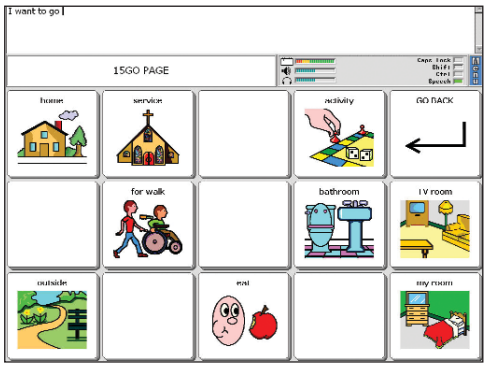
A full **35% larger** than most, the ECO-14 display screen also delivers **higher-quality graphics. Bigger, brighter,** and **more colorful** images engage young students and encourage interaction.

Promote success and reduce frustration through easier accessibility!

Larger key sizes **make access easier** for clients with motor and visual challenges. Integrated Tracker™ Inside headpointing is another option that allows access without requiring external units or accessories.

Enable speedier communication by customizing scan options!

Custom block scanning allows you to create **specialized scan options** for a client, even different patterns on different pages.



Large keys make access easier for users with severe motor or visual impairments.

Children delight in hearing cats meow or engines roar when learning new words on colorful "Visual Scenes" pages.

Enrich vocabulary teaching and learning using lively "Visual Scenes"!

ECO-14 comes pre-loaded with "Visual Scenes" pages designed to teach cause and effect and explore vocabulary at the touch of a finger. You can also **custom-build learning** scenes by importing graphics and sounds from the device's own image and sound library or from other sources.

Track progress with built-in Language Activity Monitoring!

Language Activity Monitoring software (included in every PRC device) allows you to **monitor** your client's performance, **adjust** your therapy and teaching strategies as his or her skills grow, and **document** student progress toward IEP goals.

See ECO-14 in action!
